

Allergies

Understanding Allergies

Do you react to: Dairy products or eggs? Wheat or citrus? Environmental substances (grass, perfume, smoke, etc.)? Unknown substances?

The “toxic load”

A number of stresses affect people today: chemical additives in our food and drinking water, environmental toxins, radiation stresses, countless chemical substances, the use of medicines in livestock breeding, etc.

These stresses can become all too much for some people. We see the results in the form of non-specific disturbances to our wellbeing, chronic fatigue, allergies or more serious dis-ease.

Think of it this way, if a cup is already full and we try to add more, the water will spill all over the floor. It is the same in our bodies. If the liver is already full of toxins, the adrenals overloaded with stress or if the immune system already has enough low level chronic infections to fight, then the body may not be able to deal with yet another stressor (pollen, chemicals, food etc).

The reaction of being overloaded is what we call allergies. We can think of it as our body’s way of telling us it needs to be emptied before it can make room for or handle other stressors.

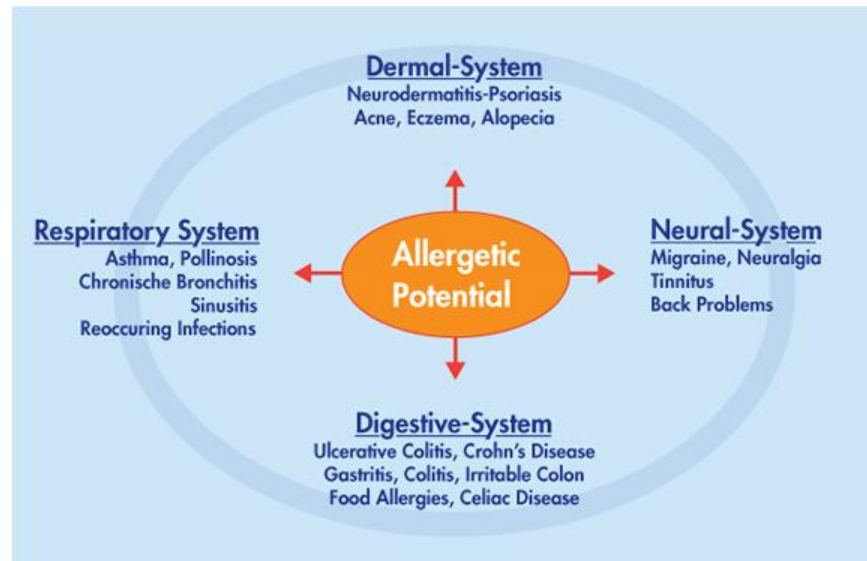

The allergy response is not a random occurrence that you just have to withstand. If we look a little deeper we can see that there are deeper imbalances such as organ toxicity or infection, especially in the liver/gallbladder, as well as kidney and colon. Also commonly weak adrenals, thymus and digestion are at play.

The gallbladder creates stones over time due to bad oils in meats and processed foods, refined sugar and other bad diet habits. Common symptoms of a congested gallbladder are burping frequently, bloating, inability to digest fats, weight gain, nausea after meals, headaches, fatigue, waking up at night (sleep issues in general), gallbladder “attacks”, especially after eating fatty foods.

Chronic, numerous or long-lasting stresses can put too much pressure on the body's ability to heal itself.

As a general rule, the body has very good self-healing powers. The body possesses a phenomenal regulation system which can even help to restore equilibrium over and over again in response to unusual influences acting on the body.

If the body experiences too many or too serious chronic stresses over a prolonged period this can impede or even block the body's regulatory ability as well as its self-healing powers. This is where Bioresonance treatment excels.

Making the first steps

When looking for supplements to clear up allergies there are a few steps that should be taken before going into allergy cleansing. The first step should be making sure you are feeding your system with efficient amount of alkaline minerals to bring the body's PH into range.

What is the body's PH you ask?

It's simply a way of charting and discovering how acidic or alkaline one's body is. Most Aussies have a less than par diet which leads to being over-acidic which is a great place for bad bacteria, viruses and cancer to live and multiply. By raising your PH to an alkaline level, your body will be able to detoxify properly and in a manner of great strength. This is where alkaline minerals can make a difference to your health.

The other aspect that should be taken into consideration is digestion.

Most people are not eating enough raw vegetables and fibre-rich foods. They eat too much processed foods, sugars and poor quality salts, which in turn, ends up in a bloating, acidity and an unhappy belly with poor digestion.

Paying more attention and becoming more aware of what you eat and how you eat it is a great place to start, but for many that's not enough.

That's where I suggest digestive aids. Getting your digestion on track can increase the body's ability to process food and help deal with cellular detoxification as well as eliminate infection, which often is the case when having issues with allergies. Due to different conditions, the body's need for Hydrochloric Acid is essential and not always provided by your body alone. As we age our bodies make less and less HCL and can contribute to allergies, bloating, gas, acid reflux etc.

Infection:

If infection is present, a personalised recommendation is highly advised. The exact remedy, dosage and length of treatment must be tested for. This is where Bioresonance and QRA is unmatched in determining the client's needs. As there are usually many life cycles to most infections it is important to treat the infection properly to completely eradicate it from the system.

Science behind BICOM Bioresonance:

STUDY: Clinical Observations of 300 Children Suffering from Asthma Treated with BICOM® 2000 Bio-Resonance Device

by Yang Jinzhi and Zhang Li

The Asthma Research Center of Jinan Children's Hospital

Abstract: From May to December of 2003, the Asthma Research Center of Jinan Children's Hospital introduced the Germany-made BICOM® 2000 to treat 415 children suffering from asthma, 300 of whom were treated with the desensitization method.

The total effectiveness rate reaches as high as 93.3%.

STUDY: Efficacy Observation of the German BICOM2000 Bioresonance Therapy Device in 79 Cases of Allergic Skin Disease

By Yang Jinzhi

Allergy Dept. of Jinan Children's Hospital

Abstract: This paper details allergen detection and desensitization therapy in 79 cases of allergic skin diseases, conducted using the German BICOM-2000 bioresonance therapy device.

The total efficacy rate reaching 89.9% and a cure rate of 74.7%.
