

Pain

Pain is the cry of the body's connective tissues for energy. Often pain is not just a local process but a systemic issue. We are talking about pain in the joints, muscle or organs that will not go away. It is all too easy to treat the symptoms with pain killers but with Bioresonance therapy you treat the symptoms and the **cause**. Bioresonance cannot treat and directly correct structural problems that may trigger the pain.

Indications are:

- migraine and headaches
- blocks in the temporal-mandibular joint
- back, neck and shoulder pain
- osteoarthritis and arthritis in the large and small joints
- gout
- soft tissue injuries
- scars
- tennis elbow and carpal tunnel syndrome
- general aches and pain
- menstrual pain

There are many experiences of patients suffering from cervical spine syndrome, recurrent lumbago, slipped discs amongst many others that have had their pain considerably reduced. A Turkish neurosurgeon was able to save patients from surgery on the intervertebral discs by using Bioresonance.

Pain therapy with BICOM bioresonance.

- stimulate healing
- reduce inflammation
- treat scars – internal and external
- treat the meridians and painful locations
- remove blockages and possible pathogens associated with pain
- stimulate detoxification

BEFORE and AFTER treatment of GOUT

Acute pain can often be rapidly reduced. Improvements have been achieved with chronic pain where other methods have been exhausted. Bioresonance has also proved effective in combination with other methods of pain therapy.

It is our experience that viruses and other infections are almost always associated with pain in the joints. In Australia we have mosquito-borne viruses that cause aching joints. So, it is essential to treat the virus "signature" in the body as well – using BICOM Bioresonance Therapy programs.

Another example is Gout, toe pain and arthritis which is often caused by a buildup of **Uric acid**. It is essential to avoid benzoic acid, the common preservative, since this is what the body detoxifies into Hippuric acid (also found where pain is). These acid accumulations are breeding grounds for bacteria and as these multiply it causes **inflammation** and then **pain**.

Killing the bacteria and breaking down of the acids using Bioresonance can have dramatic results when combined with a more healthy diet and conventional treatment.
