

## Q-Disc 3.0 - from Premier Research Labs (PRL)

The Q-Disc 3.0 is truly the Next Generation, “Smart” Cell Phone Disc. This new, thin, sleek disc is a more powerful Cell Phone Disc that works on all types of cell phones, including the newer cell phones.

In creating this disc, our goal was to bioenergetically protect the cellular biophotonic communication of the wearer from all types of cell phone emissions. Through many trials and tribulations, we were pleased to finally discover the power of paramagnetic harmonic values via the use of a combination of earth-based elements.

Thus, inside the Q-Disc is a proprietary media consisting of a full spectrum of highly paramagnetic elements which are then encased in our Vastu-designed, geometrically precise Q-Disc sheath.

We have found that a 30-second cell phone call can disrupt and weaken every cell of the body for up to 18 hours! We feel that EMFs will be the plague of the 21st century, like cigarettes were last century. We are already seeing a huge spike in brain cancer and we are convinced that is related to cell phone usage, as perhaps are many other diseases.

Protecting yourself is not an option but an urgent necessity. It may be the single most important step you can take to protecting your health. And it's easy!

**The Q-Disc is such an advancement that it not only protects you from the EMFs but converts the harmful field into a beneficial field. So you actually receive a treatment while on the phone!**

This is the third generation of the Q-Disc, updated to address the increased biofield stress output of newer cell phones. The Q-Disc 3.0 converts the increased chaotic energy field effect of newer cell phones to a coherent and beneficial field.

In addition, your cell phone (equipped with Q-Disc 3.0) can be used to *unencode food or supplements*. Simply hold your cell phone 2 inches above the food or substance for a few seconds.

It is recommended to unencode all of your supplements once they are delivered to you. Encoded means the substance has a complex electromagnetic ‘wrap’ or ‘embed’ which collapses the natural biofield of the food or substance. Often it will make the food test weak, which weakens you. This is because if you eat a food or supplement in its encoded state, often one or more of the key points on the body’s biofield will weaken.

The body must expend additional effort to digest this food or supplement, creating an unnecessary digestive burden on the body.

Due to the exponential increase of electromagnetic exposure from multiple artificial sources in our environment over the last decade and especially in the last 6 months, most foods are now encoded. When unencoded, the field of the same food shoots out to its normal field and will longer test weak.

### **Recommended Use:**

Gently clean the exterior surface of the back of your cell phone to eliminate any dust or grime. Then simply peel off the adhesive on the back of the Q-Disc and then firmly place the Q-Disc on the back of your cell phone, approximately in the middle.

The Q-disc cannot be peeled off for re-use, so perhaps just fix it to your phone with tape rather than permanently glueing it.

Please keep the Q-Disc on your cell phone at all times.

Avoid getting the Q-Disc wet. If your cell phone (and its Q-Disc) accidentally get immersed in water, please return the Q-Disc for reconditioning (for a small fee). Please do not open the Q-Disc to view its internal media; if you do so, some of its granular elements may escape and thus render your Q-Disc inoperable.

# Q-TAPE: The Ultimate EMF and Vastu Remediation Tool

Protect yourself from Electromagnetic Frequencies while Increasing Beneficial Energy

Q-Tape is made from a special metal alloy that is used to protect you and your family from harmful EMF's. It can be used to balance energy from all electrical devices, cell phones, wireless internet, microwaves, and mobile phones among other electrical devices. It is easily bendable and can be applied to virtually anything emitting EMFs making it simple to use. Q-Tape is easy to cut with scissors, and after peeling off the backing, its sticky surface makes it easy to apply to a surface. It can also be taken off a surface fairly easily if it needs to be repositioned and then replaced.

## **EMF Balancing**

The current flowing through electrical wires has a net positive charge. Q-Tape has a strong negative charge. When a small amount of Q-Tape is placed inside an electric box, the yin (Q-Tape) and yang (electric current) become balanced and the walls in your home or apartment "turn on" with a nicely resonant, balanced polarity. When opposing polarities are combined such as these, they can release a virtual shower of shimmering, high energy bio-energetic resonance.

## **Polarity Balancing**

Q-Tape is very unusual in that it has a highly negative polarity (most metals have a net positive polarity). This makes Q-Tape the perfect element to balance highly polarized electrical currents which saturate all the walls of your home.

## ***\*How to Use Q-Tape\****

### **Electrical Circuit Breaker Box**

For best effects, be sure to draw the Alpha-Dot symbol (see picture above) directly on top of the Q-Tape (so that it is embedded in the tape). This promotes superior geometric effects for electromagnetic fields.

To balance the EMF stress in your home (or office) due to A/C current, open the circuit breaker boxes and place one 7.5cm strip of Q-Tape horizontally above the switches inside each circuit breaker box. Then place a second 7.5cm strip directly on top of it (so there are two layers). Then place another 7.5cm strip vertically on the left hand side of the switches and one horizontally at the bottom of the circuit breaker box below the switches.

**Swimming pool circuit breaker box.** If so, please do the same procedure (as above) on this box.

### **Telephone/Cable Box**

To balance the EMF stress from telephone/cable service in your home (or office), place one 7.5cm strip of Q-Tape with a second 7.5cm strip directly on top of it (so there are two layers) on the telephone/cable box. Place the double strip horizontally on the top side of the outer box within 2cm to 3cm to the front of the box.

### **Electrical Transformer Box**

Place one set of two 10cm strips (double layered) horizontally on the box about 2-3cm away from the front top edge of the cover.

### **Cell Phone**

Use a Q-disk for best protection.

### **Battery-operated devices**

Place two 5cm strips (double layer) of Q-tape directly over the battery area of the device and cover with gaffer's tape.
